

Toyota Forklift Parts

Toyota Forklift Parts - Ever since 1992, Toyota Material Handling inc., U.S.A., also known as TMHU, has been the best selling lift truck dealer in the United States. This company has been situated out of Irvine, California for well over 40 years, providing a comprehensive line of quality lift trucks. With a great reputation of resilience and reliability, Toyota lift trucks have thrived in the competitive materials handling market. Quality is the keystone of Toyota's legendary Toyota Production System practiced at all manufacturing facilities, including TIEM, which is stands for Toyota Industrial Equipment Manufacturing, located in Columbus, Indiana. The bulk of the Toyota lift trucks sold in the U.S.A are built here.

All Toyota machinery and parts designed within North America adhere to the International Organization for Standardization or ISO 14001 standard. The Columbus TIEM plant has been honored on many occasions for its commitment to relentless development and its environmentally friendly systems. It is the first and only manufacturer to offer EPA and CARB-certified Compressed Natural Gas powered lift trucks on the market. To illustrate, the Toyota 8-Series IC lift vehicles emit 70 percent fewer smog forming emissions than the existing centralized EPA standards and have complied with California's strict emission standards and policies.

Toyota Material Handling, U.S.A. - The Industry Leader

Brett Wood, President of TMHU, links Toyota's achievement to its strong dedication to constructing the finest quality lift trucks while delivering the utmost client service and support. "We must be able to learn and predict the needs of our customers," said Brett Wood. "As a leader, our success also depends on our ability to address our customers' operational, safety and environmental cost issues." TMHU's parent company, Toyota Industries Corporation, often known as TICO, is listed in Fortune Magazine as the world's largest lift truck provider and is among the magazines impressive World's Most Admired Companies.

New Meaning to Environmental Accountability

Toyota's parent company, Toyota Industries Corporation, has imparted an exceptional company philosophy towards environmental conservancy within Toyota. Toyota's loaded history of environmental protection whilst retaining economic viability cannot be matched by other organizations and undoubtedly no other resource handling producer can thus far rival Toyota. Environmental accountability is a key feature of company decision making at Toyota and they are proud to be the first and only producer to offer UL-listed, EPA - and CARB -certified Compressed Natural Gas powered lift vehicles. Yet another reason they remain a leader within the industry.

In 2006, Toyota launched the 8-Series line. The 8-Series signifies both Toyota's innovation and leadership in the industry. It features an exclusive emission system that surpasses Federal EPA emission standards, and also meets California's more involved 2010 emission standards. The end product is a lift truck that creates 70% less smog forming emissions than the present Federal standards tolerate.

Furthermore in 2006, Toyota established a partnership with the Arbor Day Foundation, furthering their commitment to the environment. Upwards of 57,000 trees have been planted in community parks and national forests damaged by ecological causes such as fires, as a product of this partnership. 10,500 seedlings have also been circulated through Toyota Industrial Equipment's system of dealers to non-profit organizations and local customers to help sustain communities all over the United States

Toyota's lift vehicles provide superior output, visibility, ergonomics and durability, and most significantly, the industry's leading safety technology. The company's System of Active Stability, also known as "SAS", helps limit the risk of accidents and injuries, in addition to increasing productivity levels while minimizing the potential for merchandise and equipment breakage.

System Active Stability is able to discern conditions that may lead to lateral volatility and likely lateral overturn. When one of these conditions have been detected, the SAS will immediately engage the Swing Lock Cylinder to re-stabilize the rear axle. This adjusts the lift truck's stability trajectory from triangular in shape to rectangular, providing a major increase in stability which substantially reduces the likelihood of a mishap from a lateral overturn. The Active Mast Function Controller or the Active Control Rear Stabilizer also helps to avoid injuries or accidents while adding durability.

SAS was initially released to the market on the 7-Series internal combustion models in 1999 and subsequently catapulted Toyota into the industry leader for safety. Since then, SAS have been built-in to nearly all of Toyota's internal combustion models. It is standard equipment on the latest 8-Series. There are more than 100,000 SAS-equipped lift vehicles in action, exceeding 450 million hours combined. The increased population of SAS-equipped vehicles in the field, along with mandatory operator instruction, overturn fatalities across all models have decreased by 13.6% since 1999. Furthermore, there has been an overall 35.5% fall in industry wide collisions, loss of control, falls and tip overs from a lift vehicle for the same period.

Toyota's hardnosed principles extend far beyond the machinery itself. The company believes in providing general Operator Safety Training courses to help clients meet and exceed OSHA standard 1910.178. Training packages, videos and an assortment of resources, covering a wide scope of matters-from personal safety, to OSHA policies, to surface and cargo conditions, are offered through the seller network.

Toyota has sustained a relentless existence in the United States ever since its first sale. In 2009, Toyota Industrial Equipment Manufacturing, produced its 350,000th lift truck. This reality is demonstrated by the statistic that 99% of Toyota lift trucks bought in America now are built in the United States.

TMHU is based in Columbus Indiana and houses nearly 1 million square feet of production facilities over 126 acres of land. Facilities include a National Customer Center, as well as manufacturing operations and distribution centers for equipment and

service parts, with the total investment exceeding \$113 million dollars.

The contemporary NCC was designed to function for TMHU customers and dealers. The facility includes a 360-degree showroom, a presentation theater complete with stadium seating for 32, an area for live product demonstrations with seating capacity for 120; a presentation theater; Toyota's Hall of Fame showcasing Toyota's story since the birth of its founder, Sakichi Toyoda, in 1867, and lastly a instruction center.

TMHU has 68 official industrial equipment dealers, along with 189 dealership locations all through the United States, offering the most complete and inclusive consumer support and customer service in the industry. The company's new and Licensed Used lift vehicles, service, parts, and financing capabilities make Toyota dealerships a one-stop shop to ensure overall client satisfaction.
